Next Step

Debug the I2C controller board for Tommelise 3.0

...the only tools a dwarf needed were his axe and some means of making fire. That'd eventually get him a forge, and with that he could make simple tools, and with those he could make complex tools, and with complex tools a dwarf could make more or less anything.

The Truth, Terry Pratchett

that was then...

this is now...

Tommelise 3.0, Sampo, is a desktop factory that you can make with a very few hand tools for about \$150-250. Once you've built it you can use it to make ... *more or less anything, including another Tommelise.*
